

EB22 Telling Time Part 2

How to read time?

If you need to know the time more specifically, some clock faces have four markers between each number. Each marker signifies an additional minute.

Look to see if there is another hand that spins around or is moving quickly, that is the seconds hand. Some clocks don't have it, and in any case, it's optional whether to read the seconds hand. If you'd like to read the seconds hand, read it like you read the minutes hand.
